	Variability
	Temperature

LOCALLY RELEVANT RESEARCH

With cold temperatures and large forests, and a high rural population, Maine faces deforestation and rising temperatures.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of the University of Maine, chosen because of its research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
