## LOCALLY RELEVANT RESEARCH

With the Mississippi River, its low elevation, and a high rural population, Mississippi faces flooding and damage to agricultural land.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of Mississippi State University and the University of Mississippi, chosen because of their research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).

KEYWORDS	
<i>Local</i>	Rice
	Greenhouse Gas Emissions
	Hydraulic Conductivity
	Numerical Modeling
	Watershed
<i>Regional</i>	Change Scenarios
	Water Quality
	Photosynthesis
	Sediment
<i>National</i>	Temperature
	Impact
	Swat Model
	Drought
