<i>National</i>	Temperature
	Precipitation
	Variability

LOCALLY RELEVANT RESEARCH

With desert climate and a large quantity of mines, and a high rural population, Nevada faces water quality issues and pollution.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of the University of Nevada, chosen because of its research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
